

AMENDMENTS TO THE ABSTRACT

Please replace the abstract of the disclosure with the following new abstract:

A heating device for a motor vehicle that includes an internal combustion engine and a vehicle interior. The heating device includes a cooling circuit for cooling the internal combustion engine, a heating circuit that is provided with at least one heating element for heating the vehicle interior, and an electric heater, such as an auxiliary PTC heating unit. An additional heat source is connected to the cooling circuit and/or the heating circuit as a supplementary heater.
